## SHADE YOUR EYES.

Shade your eyes with my colored glasses. Bicycles have a tendency to induce fatigue of the optic nerve, retina and ocular muscles, and promote congestion of the external eyeball and iris, because of exposure to wind, dust and sun. My tinted glasses will protect your eyes from all the annoyances incident to wheeling.

It isn't the material that goes into your repaired watch that counts, it's the way it's put together.

that does the business, any bungler can buy the fine kinds of material that I use in repairing; but skill is the most valuable material that can be used in watch repairing; and the bungler can't buy it. I sell my skill for what it is worth and it will cost you less than bungling at lower prices.

## Quality

Never experiment with so important an article as the human food

It is the high quality of Royal Baking Powder that has established its great and world-wide reputation.

Every housewife knows she can rely upon it; that it makes the bread and biscuit more delicious and wholesome—always the finest that can be baked.

It is economy and every way better to use the Royal, whose work is always certain, never experimental.

There are many imitation baking powders, made from alum. They may cost less per pound, but their use is at the cost of health.
